

KwikTag Appliance

Turnkey Document Imaging.

Now KwikTag is as easy to deploy as it is to use! KwikTag 4.0 provides accelerated value because it is delivered as a complete, pre-installed system - all on a network Appliance. This state-of-the-art delivery provides a productive, secure and affordable way for you to capture your critical business documents electronically.

Based on Microsoft Technologies, this turnkey solution includes all the components that are required to run KwikTag. The application software, hardware and operating system are bundled to simplify the acquisition, installation and deployment process.

V4.0 delivers even more value because upgrades and product updates are automatic – once plugged into the network, the KwikTag Appliance is virtually maintenance-free. KwikTag updates are packaged and sent to the server via the Internet.

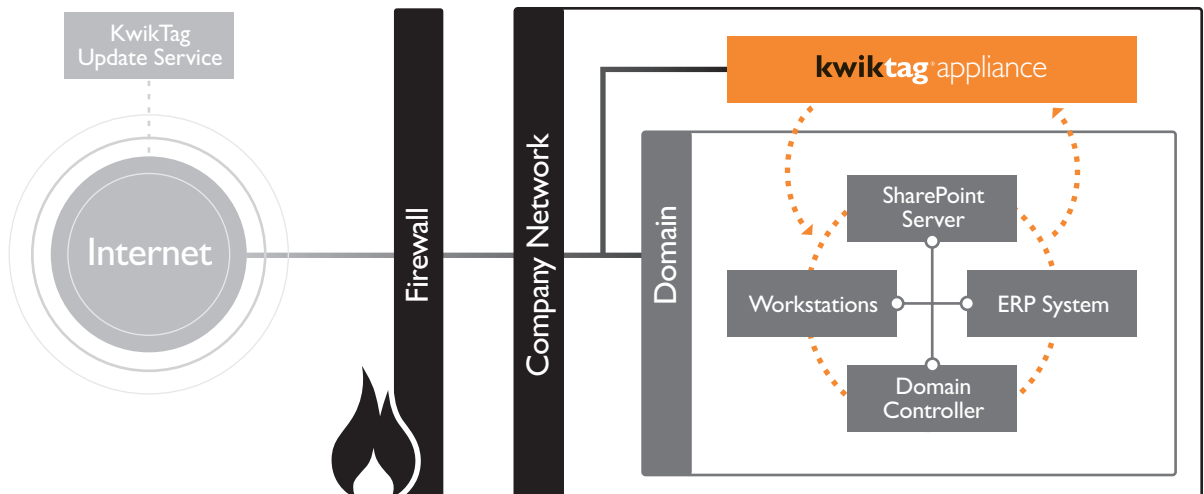

A Turnkey Solution

- Bundled components for simplified acquisition, installation, deployment and maintenance
- Includes pre-installed server hardware, software and the Windows operating system
- Plug-and-Play technology is ready for immediate use
- No need for additional software or licenses
- Optimized for KwikTag document imaging

Single Source for Support

- Hardware, software and solution all supported by ImageTag
- Automated maintenance updates

The KwikTag Appliance provides automated updating of both the application and underlying operating system from the KwikTag update service. This innovative delivery model is available in a variety of sizes to match your specific solution requirements.

KwikTag Appliance Facts

- An Appliance is a tightly integrated combination of software and hardware, highly optimized and tuned for a very specific IT operation. Since an Appliance is tethered to the Internet, it can update itself and repair/recover from defects, and enhance its capabilities automatically. As such, an Appliance has a low Total Cost of Operation.
- The KwikTag Appliance is delivered with a Microsoft Windows Server 2003 Standard.
- Your network is secure because the KwikTag Appliance sits off the domain. All interaction to and from the Appliance occur over standard and open Internet protocols that can be monitored and traced using any standard security infrastructure your IT department has in place. The Appliance comes with its own virus protection software that is updated via its connection to the Internet.
- KwikTag 4.0 introduces an administrative feature called Active Directory Sync. The result delivers single account administration. Because the KwikTag Appliance is connected to the network but is not part of the domain, you can set-up accounts and leverage your existing accounts/groups.
- Historically over 80% of ImageTag's customers expand their KwikTag application into other departments. For that reason, the Appliance is configured to support growth in an organization. Even at these heightened levels, standard configurations can accommodate between three and five years of storage.
- The KwikTag Appliance is guaranteed. ImageTag is responsible for the reliability and availability of the whole solution. If the system is down for any reason, software or hardware, ImageTag will provide the necessary support. The standard solution includes a three-year replacement warranty.
- To facilitate backup at your location, the Appliance is configured to allow access for standard backup software to sweep SQL backups and the image repository.
