

imageMANAGER

Do you know what you spend on printing?

To eliminate inefficiency and waste and start saving money on your print management, it is vital to gain a comprehensive understanding of your company's current document environment. And that's what imageMANAGER is all about.

Here's how the program works:

This innovative software program provides hard data about every device in your company's printing fleet. The software installation takes less than five minutes. A key-based collection agent can begin gathering information even faster. So in very little time, you can start capturing a lot of information. The imageMANAGER can produce and organize the following information on each piece of equipment:

- Device description and serial number
- Toner levels
- Page counts
- Cost per copy
- Usage reports
- Trend patterns
- Much more

The goal of imageMANAGER is simple: eliminate the guesswork about your company's current office equipment. It determines current inventory, volumes, workflow and costs—and monitors all of these factors on an ongoing basis.

With this information in hand, the Gordon Flesch Company can help you design a more efficient and cost effective operating environment.

Get started:

Don't miss this opportunity to put the power of information to work for you. Visit www.gflesch.com, or contact your GFC Sales Representative.

GFC
imageMANAGER

Print Management. Simple. Secure.

imageMANAGER

imageCARE is a proprietary, three-step process available only from the Gordon Flesch Company. It's designed to save money for your company by studying, redesigning and servicing your company's printing environment and processes.

Step One:

imageMANAGER provides in-depth analysis of your company's current printing usage.

Step Two:

imageCONTROL creates a customized equipment and document workflow plan to eliminate waste, duplication and inefficiency.

Step Three:

imageSERVICE provides the training, supplies and on-site service to make sure everything works—all the time.
