

ELECTRONIC CONTENT MANAGEMENT

The Gordon Flesch Company now offers a new and simpler way to implement Laserfiche® electronic content management software. We have partnered with Amazon Web Services™ to offer **Laserfiche “Docs-on-the-Cloud”** electronic content management service.

“Docs-on-the-Cloud” is a private, virtual server optimized for Laserfiche users who do not wish to support the hardware requirements of on-premise servers. Traditionally, Laserfiche requires complex internal client servers to host the software, but the web-based service eliminates the need for you to install and support physical servers at your business. The “Docs-on-the-Cloud” servers are hosted on Amazon data centers and fully maintained by Amazon Web Services.

SAVES TIME

Installing your own server takes a lot of time and resources. The installation for the Laserfiche “Docs-on-the-Cloud” only takes a few days and is performed completely by the Gordon Flesch Company.

SAVES MONEY

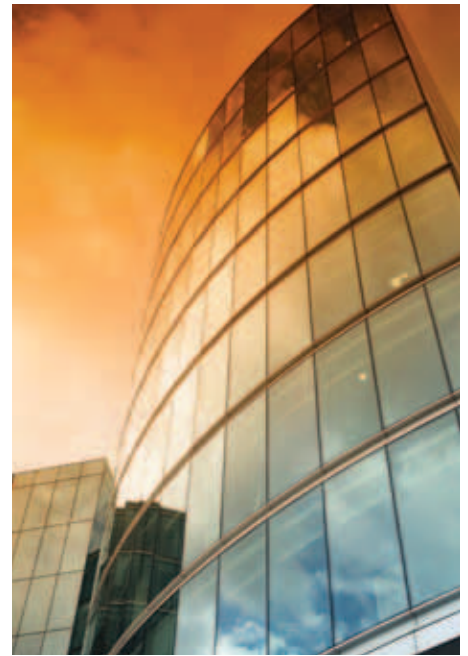

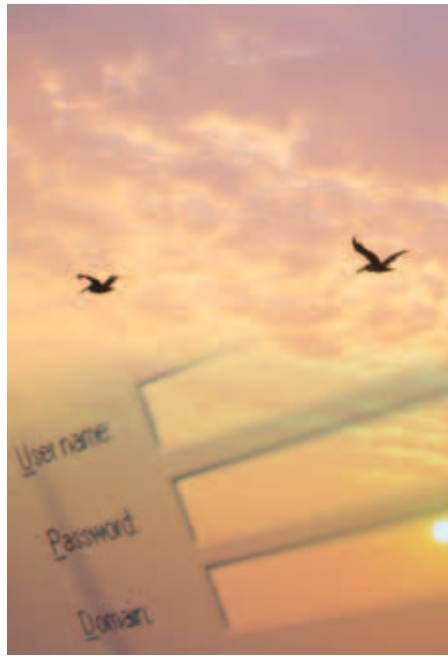

“Docs-on-the-Cloud” doesn’t require any expensive up-front hardware or server costs, so businesses with more modest IT budgets can take advantage of this electronic content management software. The only cost is an easy, monthly fee.

SAVES HASSLE

You won’t have to worry about server failure or downtime. Amazon Web Services, who houses some of the most sophisticated servers in the world, monitors everything and provides frequent backups and redundancies.

The Gordon Flesch Company is committed to providing the best business solutions to our customers. When you choose Laserfiche “Docs-on-the-Cloud” as your electronic content management service, you can rest assured that you’ll be fully supported by the Gordon Flesch Company and Amazon Web Services.

CONVENIENT ACCESS

Since your information is no longer tied to an internal server, it can be accessed at anytime from anywhere in the world.

Your IT department will appreciate it because there is no need to spend time updating the software or servers — the Gordon Flesch Company and Amazon Web Services automatically perform all updates remotely.

SECURE

The “Docs-on-the-Cloud” servers are hosted on Amazon data centers and fully maintained by Amazon Web Services.

All your information is guarded by Amazon’s security systems — an industry leader in online security standards.

BENEFITS

- Saves time
