

NICK BAMBULAS

vCIO

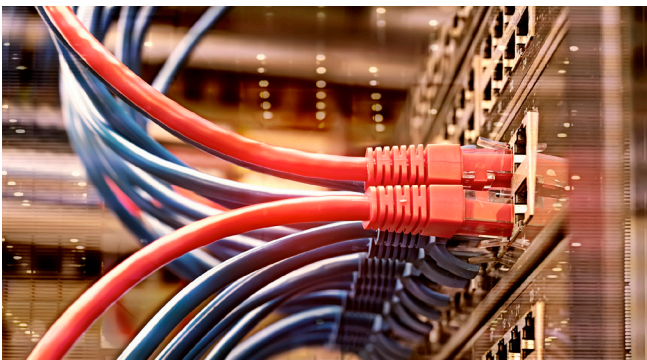

Nick Bambulas has been a vCIO for EleviTy for the past seven years and he has been in the IT industry for over 17 years. Before coming to EleviTy, Nick worked for over five years at a defense contractor and freight airline, where he was the IT manager supporting the aviation and defense contracts divisions.

"As a defense contractor, we were expanding quickly, so one of our bigger projects was building a brand new data center from the ground up," Nick said. "We then managed that infrastructure, which was distributed across multiple locations in the United States and overseas, supporting our government contract employees stationed in these locations. These teams directly supported military operations, so it was a great experience."

And while Nick now works with small to medium businesses within the United States, his IT and business experience are just as essential to his role as a vCIO.

"The primary benefit of having a vCIO is that we become the IT department our clients don't have," said Nick, "to provide them the vision and guidance on how to use technology as a means of accomplishing their business goals."

Nick works hand-in-hand with company executives to turn their thoughts and ideas into workable solutions, creating a technology roadmap and oftentimes phased processes, to save money and improve efficiency within the client's workplace.

"We provide clients the vision and guidance on how to use technology as a means of accomplishing their business goals."

FUN FACT #1
