## LFIntegrator™

for Microsoft Dynamics® GP

- Import Invoice Laserfiche to GP

- Scan to Laserfiche
- Search Laserfiche by Vendor
- Open Laserfiche from GP
- Push Check Detail
- Scan Receipts

### ON SCREEN INTEGRATION OF LASERFICHE WITH GP

LFIntegrator for Dynamics GP (Great Plains) brings the on-the-screen integration of accounting processes with their myriad supporting documents.

LFIntegrator empowers Great Plains users to import invoices, scan, search and link supporting documents in Laserfiche document management applications directly from the Great Plains menu bar. LFIntegrator automatically populates Laserfiche template fields with data from Great Plains and vice-versa. Streamline your accounting processes by having all documents related to a transaction immediately available on the Great Plains user screen. For example, use Laserfiche Workflow Manager to:

- Circulate an invoice for approval to pay, and have it load directly into the Great Plains Payables Entry screen;
- Retrieve and display a supporting document from the Laserfiche repository automatically based upon the vendor or transaction you are viewing in GP; or
- Immediately follow an audit trail to all associated documents.

Customers use LFIntegrator to get the utmost value from the imbedded costs of Great Plains and Laserfiche ownership. For those Great Plains users contemplating a full-function document storage solution, LFIntegrator coupled with Laserfiche assures integration with the internal accounting system from day one. LFIntegrator runs in Windows XP, Vista and Windows 7 as an add-in to the Great Plains client 'Additional' menu item.

Other products have limited functions, and may not be context specific to the user's task. LFIntegrator has been designed with the direct input of Great Plains users and resellers to assure optimal integration with the task at hand. In one example, paper based invoice processing resulted in double keying of each item - once in the document system and once in Great Plains. With LFIntegrator for Great Plains, data entry into the Payables module is completely automatic, while the workflow process is simultaneously updated with voucher and check number information.

Dynamics GP versions supported:  
2013, 2015, 2016
