

# ENHANCED CYBERSECURITY IDENTIFY

## IDENTIFY THREATS

### *Police Patrol for Your Data Systems*

- *Are your employees aware that they are targets for hackers?*
- *Is rogue IT threatening your network security?*
- *What is your worst cyber nightmare? What is your plan to prevent it?*

## Our Approach

Nothing is “hacker proof.” Attackers only need to identify a single vulnerability and exploit it. At GFC, we help identify the threats you may face and give you the resources and tools needed to limit your exposure. Our training and education increase awareness for your staff, a critical component for successful cybersecurity protection today.

First, we build a security profile and complete risk assessment for your company’s IT infrastructure and network, so you can take necessary steps to mitigate your risks. We give you the tools to provide industry-standard security for devices and comprehensive training for your staff.

## Key Features

- **Profile and Protect** features pre-built and customizable profiles that tell you exactly what threats your company might face. This includes comprehensive security assessments and reports to identify threats and provide warnings about emerging risks.
- **DarkWeb Scanning** tools search and identify compromised data on the Dark Web, which is like an illicit eBay for stolen data.
- **KnowBe4 Security Awareness Training** will educate your staff with cyber training so they can understand risks and make informed decisions.
