RESPOND & RECOVER

Online Secret Service

- *Do you have intrusion detection and prevention features like encryption, SIEM, authentication and access controls?*
- *What is your company's disaster recovery plan and when was it reviewed and updated?*
- *In the event of a breach, do you have a plan? Can your system be restored quickly as if an attack never happened?*

Our Approach

The third layer of our service delivers industry-leading Security Information and Event Management (SIEM) technology to collect and analyze information from network devices, endpoint logs, and threat intelligence feeds. This provides greater situational awareness as well as advanced reporting and log retention for common regulatory and legal requirements like HIPAA. The insights and analysis provided help ensure your cybersecurity planning is accurate, complete, and ready to meet the real-world challenges you will face.

Key Features

- The **EventTracker** Security Information and Event Management (SIEM) platform identifies advanced malware, exploits and script-based stealth attacks.
- Monitor key log files to identify and correlate events that could be malicious for security as well as for legal and regulatory reporting.
- Generate daily reports and threat analysis outlines for regulatory reporting, including PCI, HIPAA and NIST-800.
